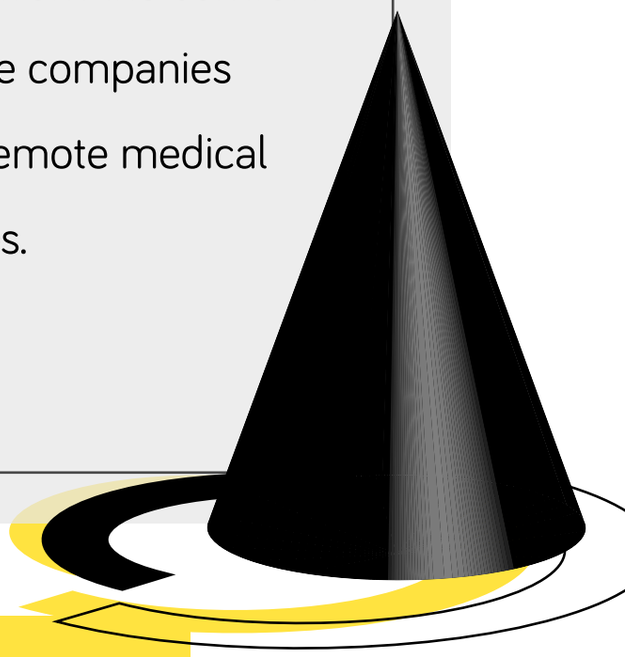
Online Healthcare Consultation, Monitoring & Data Collection

Covid-19 has shaken the healthcare service industry to its' core creating a new need for remote healthcare that is efficient, fast and convenient- mostly from the comfort of our home. We will see more and more companies such as FDNA who provides precision remote medical solutions from the comfort of our homes.



Remote Working & Video Conferencing

TOP /21...

Working from home or away from the office will continue to expand.

Research shows that for most people working away from the office enhances capacity, creativity and saves a lot of time commuting to and from work thus enabling greater quality time with family, friends and our hobbies.

Looks like the balance between work and life will finally get its day.

Contactless Delivery & Shipping

No contact deliveries are now bigger than even.

By now we are all familiar with home food delivery left outside our door for us to collect.

Many applications now offer drop-off delivery options as part of the new norm.

Wave BL takes this much further and provides original documents digitally authenticated eliminating the need for couriers altogether.

TOP /21

Customer Learning Experiences

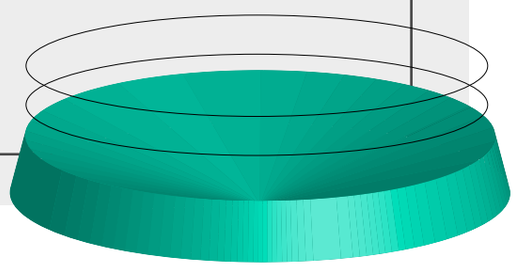
Covid-19 has not only increased our online shopping but has changed our shopping habits and experience altogether. Learning these new customer habits and understanding how to attract customers on a digital - first approach and providing the relevant content is higher than ever before.

TOP /21

Internet of Behavior- IoB

This is all about using data to change behavior.

For instance, monitor grocery purchasing habit and setting insurance premium based on your health choices. Commercial customer data collected to understand the "why" behind people's choices and guide for a change.



TOP /21

Hyperautomation

Anything a business can automate it will. Procedures and processes that were once conducted by people over patched technology will now be conducted autonomously on a unified platform. Companies such as Percepto who conduct site visual monitoring and inspection including analysis of all gathered information, alerting of any security bridges etc. will be in demand.

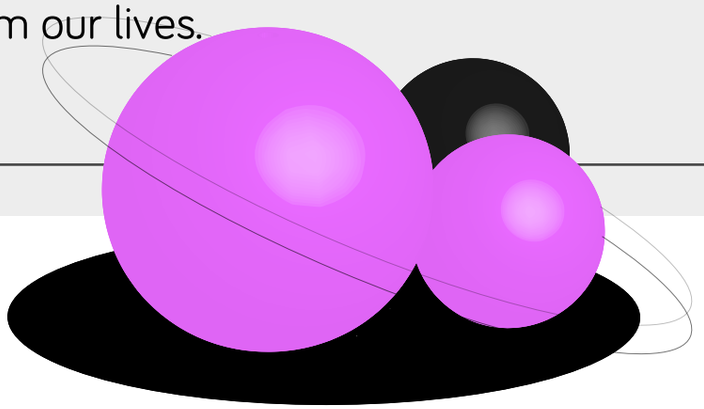
5G

The next step from IoT is 5G. 5G is expected to change our lives completely and turn our Spotify, YouTube and overall data usage into AR and VR environment. All leading telecommunication companies arenow working on developing 5G applications and support this revolution are companies such as Altair who provides the world's fastest chipset that will forever transform our lives.



Blockchain

Blockchain will take a broader perspective this year and will expand not just to cryptocurrency but as an infrastructure altogether. A Blockchain infrastructure, simply put, is an infrastructure were you can only add data and not deduct any data. Companies such as Algoz are making a greater presence in the market.
